
BrewMaster UI

Modern Android Console for Professional Baristas

| Core Design Principles

Intelligent Logic

AI-enhanced recipe adjustment based on bean processing and environmental data.

Precision Control

Dose-to-ratio automation with milligram precision across all brewing methods.

Visual Focus

High-contrast Dark Mode optimized for glare-free readability in coffee shop lighting.

| The Console Interface

User-Centric Controls

The main interface uses large, touch-friendly cards to input critical parameters. Every change in dose instantly recalculates the entire brew sequence.

- ✓ Real-time yield calculation.
- ✓ Dynamic grind level icons.
- ✓ Integrated process database.

Contextual Parameters

Coffee Profile Database

By selecting the processing method (Aerob vs. Anaerob), the UI automatically pre-sets the target water temperature to prevent over-extraction.

$$T_{\text{rec}} = f (P_{\text{method}} , R_{\text{level}})$$

Adaptive Ice Brew Logic

Split Ratio Calculation

When "Ice Mode" is active, the app calculates the precise hot water pour needed to maintain the target TDS before diluting with ice.

📦 Target Ice: 40% of Total Volume

🔥 Hot Water: 60% of Total Volume

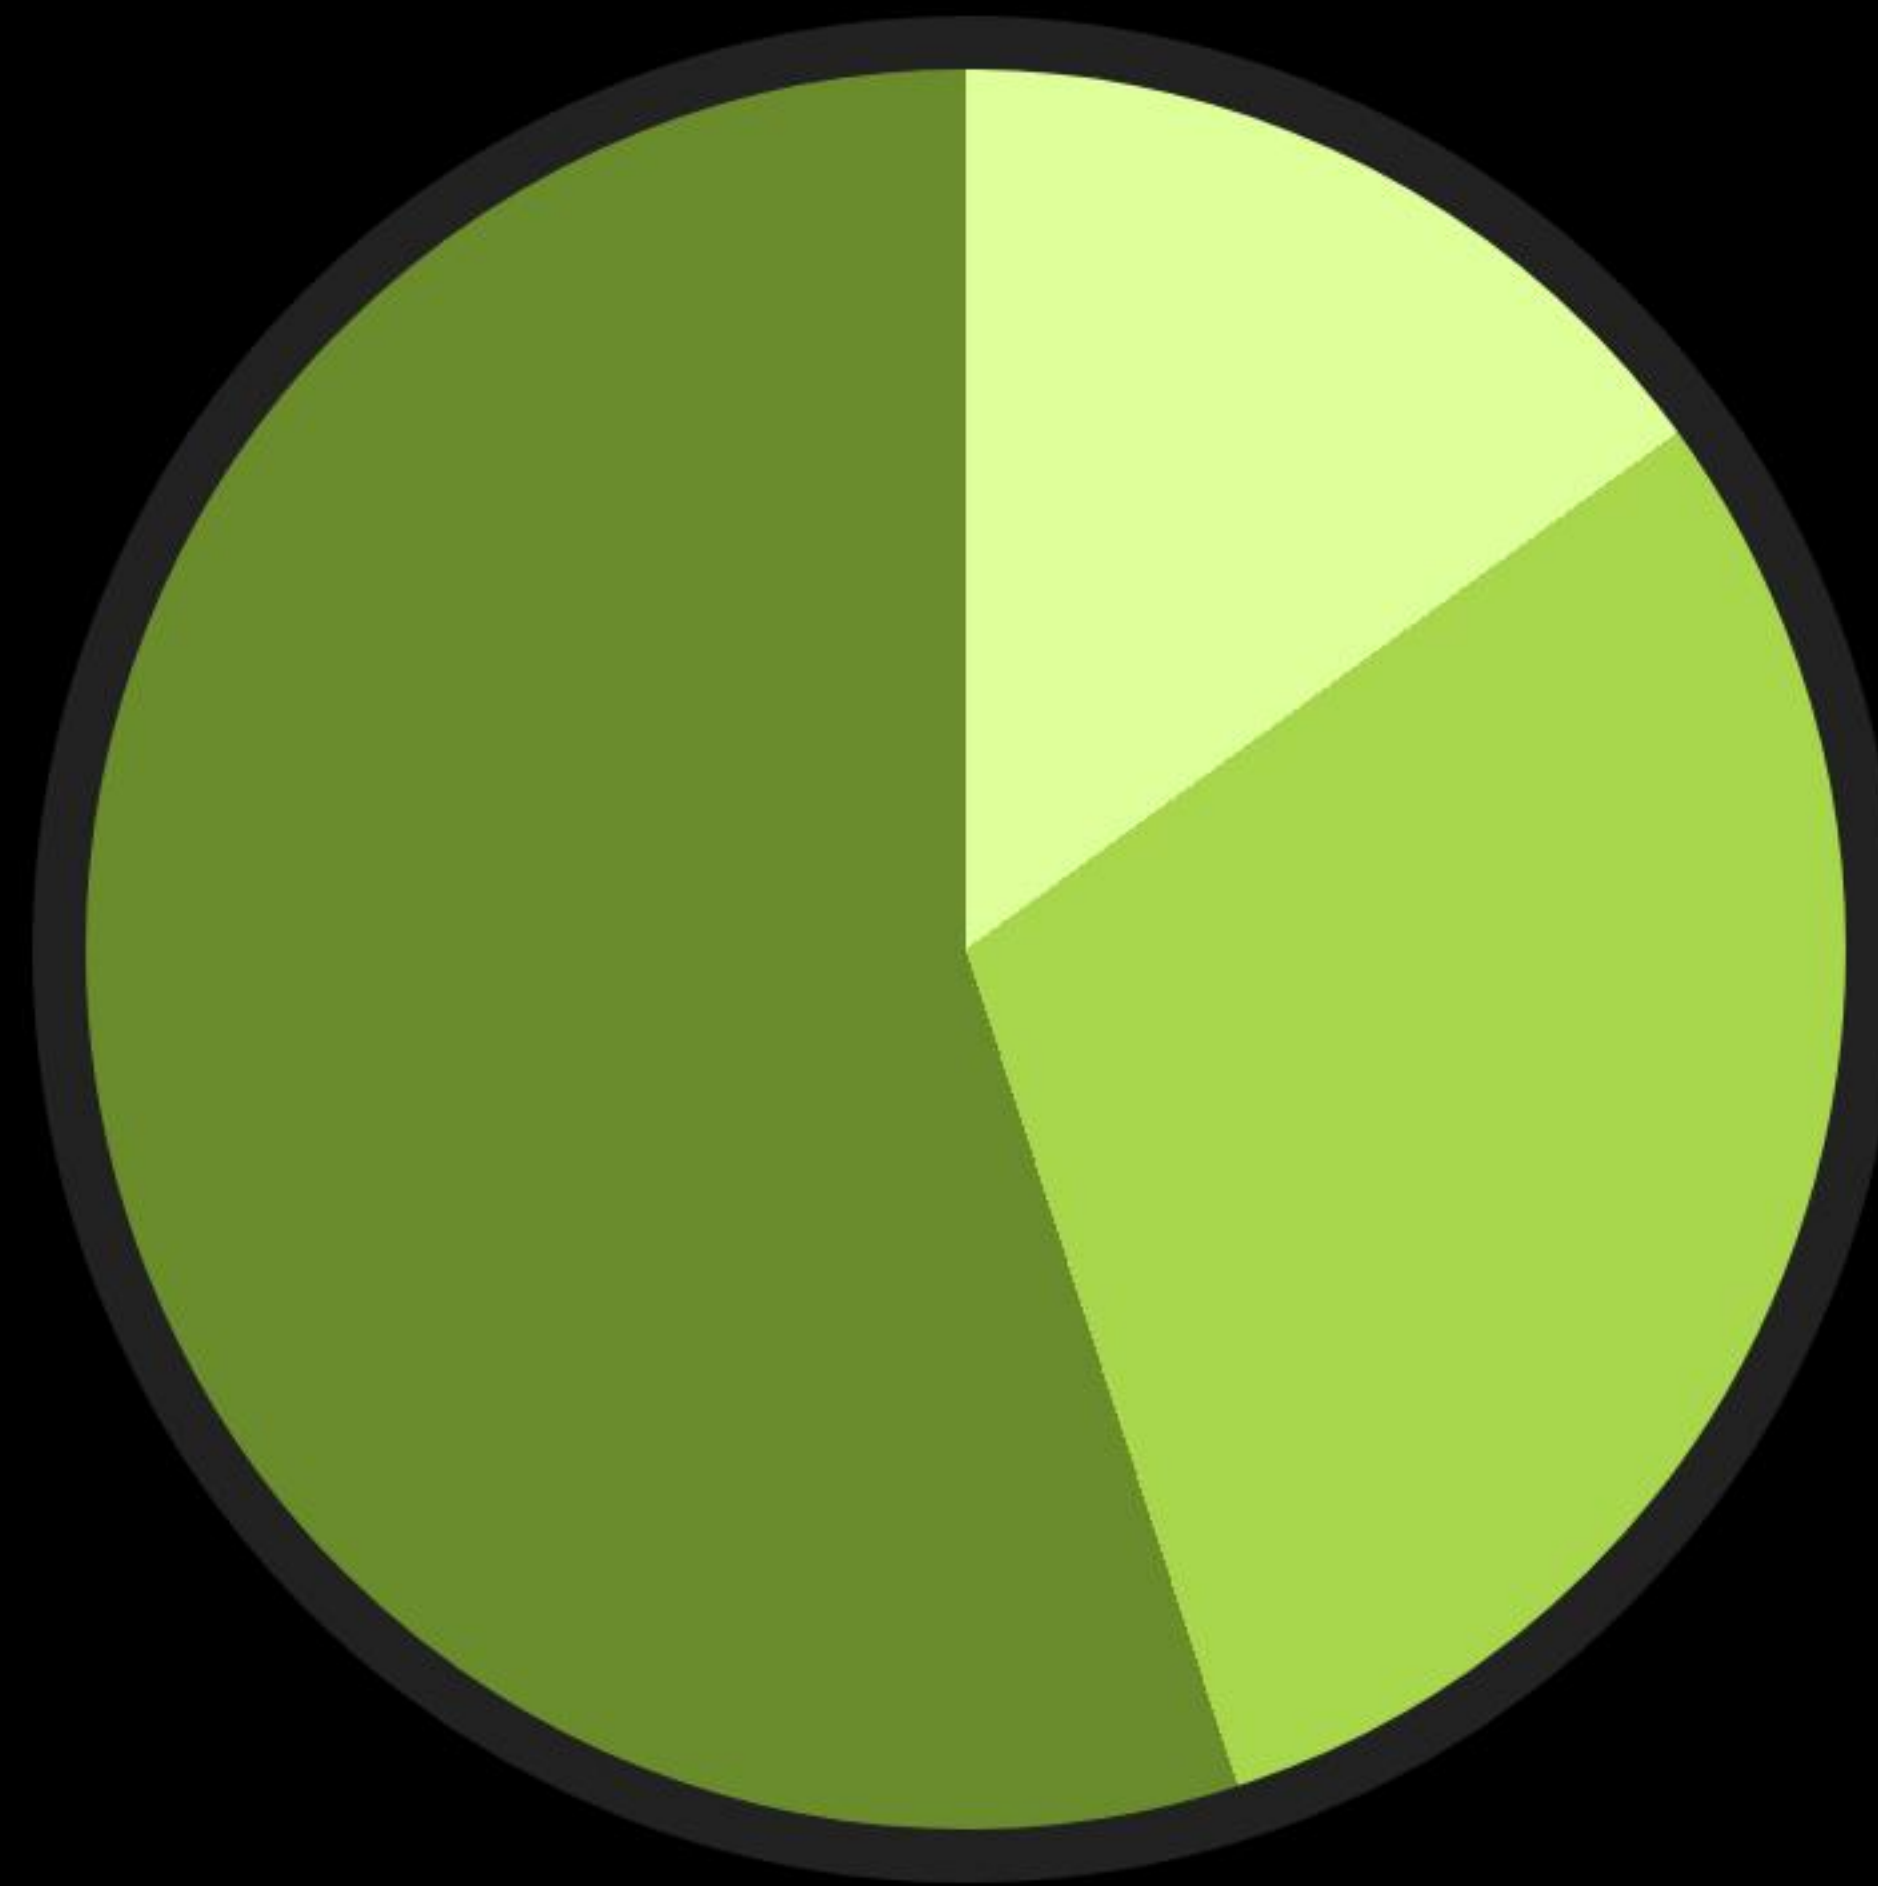

Intelligent Process Presets

Process Type	Recommended Temp	Grind Recommendation	Extraction Note
Aerobic (Washed)	92°C - 94°C	Medium-Fine	Clean & Bright
Anaerobic (Natural)	88°C - 90°C	Medium	Fruity & Winey
Honey Process	90°C - 92°C	Medium	High Sweetness
Dark Roast (Indo)	85°C - 88°C	Medium-Coarse	Heavy Body

| Grind Size Spectrum (Microns)

| Dynamic Brew Phases

-  Blooming (15%) - 0:45s
-  First Pour (30%) - 0:45s
-  Final Pour (55%) - 1:15s

| Real-Time Step Alerts

Blooming Phase: Pour 2x coffee dose (e.g. 40g). Release CO2 for clarity.

Agitation Phase: Use circular motion to saturate all grounds evenly.

Audio-Visual Alert: Application will vibrate at 0:45 and 1:30 marks.

Stop Command: Clear "ANGKAT V60" prompt when yield is achieved.

| Brew Consistency Rate

100%

By strictly adhering to process-based temperature and dynamic dose-ratio math, BrewMaster guarantees identical flavor profiles in every session.

A hand is pouring a dark brown liquid, likely coffee, from a glass carafe into a glass cup. The liquid is captured mid-pour, creating a thin stream. The background is a blurred kitchen setting with a sink and faucet. The text is overlaid on the image.

SIAP!

ANGKAT V60

Penyeduhan selesai pada target volume 230ml.

Ready to Code?

Seluruh logika kalkulasi dan parameter UI telah siap diimplementasikan.
